

THIEL ViewPoint installation instructions with plasma screen mounted.

1. Hold speaker against wall, against plasma side and in desired location. Then mark the mounting hole locations by inserting a #1 philips screwdriver or a pencil through the mounting holes.

2. Set speaker aside and drill 1/8" holes at marks through wall surface material. If stud is encountered continue drilling a pilot hole. If there is no stud expand the 1/8" hole to 3/8" and install the provided expansion anchor.

3. Connect the speaker input wires and screw the speaker to the wall using either the wood screw or the anchor screw. Make final alignment adjustments before tightening the mounting screws.
