

SCS3

- Ideally suited for main, center, and rear channel use
- Coaxial/coplanar driver mounting for correct time-response delivers full-range performance with vertical, horizontal, shelf, or stand placement.
- Outstanding clarity and detail provided by innovative, very low distortion drivers.
- Excellent for both your favorite movies or music

The SCS3 is an extremely versatile, small-sized, magnetically shielded, two-way loudspeaker designed for stereo or multichannel music and home theater systems. It performs equally well as an excellent full-range stereo pair, surround-sound, and high performance center-channel speaker. Its excellent fidelity makes the SCS3 as comfortable playing demanding music as it is playing your favorite movie soundtracks. The SCS3's coaxially mounted drivers allow it to be oriented vertically or horizontally without compromising accurate time response and to deliver exceptional performance regardless of speaker or listener position.

"The SCS3 is great as a surround or main speaker."

—Brent Butterworth, *Home Theater*, August 2000

"Attractive, original, musical, lively, multipurpose: the SCS3s will become great classics capable of touching the heart of anyone loving music."

—Jean-Philip Grondin, *Haute Fidelite*, July 1999
